TO: James L. App, City M anager
FROM: Doug M onn, Public W orks Director
SUBJECT: W astewater Facility Charges
DATE: $\quad$ November 1,2011

Needs: $\quad$ For the City Council to consider adoption of wastewater facility charges (i.e., sewer connection fees).

FACTS: 1. W astewater facility charges are imposed on new development to pay for public wastew ater facilities that enable and/or serve development.
2. Primary facility charge cost drivers include a share of the existing system's depreciated value, upgrade of the wastew ater treatment plant, and other capital projects required for buildout.

- The existing system is oversized for growth. Its estimated value is $\$ 147$ million, adjusted for depreciation. Facility charges reflect a reimbursement to existing wastew ater system users for their investment in an oversized wastew ater system.
- An upgrade of the City's wastewater treatment plant is necessary to replace obsolete technology, improve the quality of treated wastew ater discharges into the Salinas River, serve both users and growth, and comply with increasingly stringent State and Federal discharge regulations. The project is estimated to cost $\$ 49.6$ million.
- Additional projects totaling $\$ 32$ million over the next 16 years are needed to provide reliable capacity for growth.

3. The City Council retained the services of Kennedy/Jenks Consultants and TJ Cross Engineers to perform a wastewater needs assessment, as well as user rate and facility charge studies. The findings of both studies were presented to City Council on September 6, 2011.
4. City Council authorized the process of notifying ratepayers of proposed user rate increases per California Constitution Articles XIIIC and XIIID (Proposition 218). That process began September 21, 2011. A hearing on the proposed user rates is set for November 15, 2011.
5. Revenue generated by the existing wastewater facility charges is inadequate to cover the costs of new development's share of existing oversized and future facilities.
6. In July 2011, the Central Coast Regional W ater Quality Control Board (W ater Board) issued a Time Schedule Order that requires the City to adopt increased wastew ater facility charges by November 1, 2011. Failure to meet this deadline may subject the City to fines.
7. City Council considered increased wastewater facility charges on October 4 and 18, 2011. City Council directed staff to schedule another public hearing for November 1, 2011.
8. If the proposed facility charges are reduced, the City may have to adjust user rates.
9. Notification of tonight's public hearing was made in accordance with Government Code Section 66016.

## ANALYSIS\&

CONCLUSION: The following tables list the proposed wastewater facility charges as stated in the "W astewater Facility Charge Final Report" dated September 2011, prepared by Kennedy/Jenks Consultants (Attachment 1). Details regarding the calculation of the proposed wastew ater facility charges are discussed in the report.

## Proposed W astewater Facility Charges

| Residential Charges <br> - Per Unit | Equivalent Dwelling Units (EDUs) | Charges effective Jan 1, 2012 | Charges effective Jan 1, 2013 | Charges effective Jan 1, 2014 |
| :---: | :---: | :---: | :---: | :---: |
| Single Family Dwellings, including Condominiums | 1 | \$7,300 | \$9,100 | \$10,900 |
| Multi-Family Dwellings | 0.9 | \$6,570 | \$8,190 | \$9,800 |

| Non-Residential <br> Charges- Per <br> water meter size | W ater <br> Meter size <br> (inches) | EDUs | Charges <br> effective <br> Jan 1,2012 | Charges <br> effective <br> Jan 1,2013 | Charges <br> effective <br> Jan 1,2014 |
| :--- | :---: | ---: | ---: | ---: | ---: |
| Non-Residential <br> Accounts- All <br> Types | $5 / 8 \& 3 / 4$ | 1.00 | $\$ 7,300$ | $\$ 9,100$ | $\$ 10,900$ |
|  | 1 | 1.67 | $\$ 12,200$ | $\$ 15,200$ | $\$ 18,200$ |
|  | 2 | 3.33 | $\$ 24,300$ | $\$ 30,300$ | $\$ 36,300$ |
|  | 3 | 5.33 | $\$ 38,900$ | $\$ 48,500$ | $\$ 58,100$ |
|  | $\$ 10.00$ | $\$ 73,000$ | $\$ 91,000$ | $\$ 109,000$ |  |

EDU = equivalent dwelling unit. Non-Residential facility charges to be based on meter size up to 3 -inch water meters. Charges for meters larger than 3-inch will be based on estimated wastewater generation expressed in terms of EDUs and in no case shall be less than that associated with a 3 -inch water meter. See attached Resolution for additional conditions.

Attachment 2 is a resolution to implement these facility charges.
Alternatively, the City Council may phase in the facility charge increases over a fiveyear period instead of three to reduce short-term impact on new development. If so,
the schedule of facility charges contained in Exhibit A of the attached resolution would be replaced with the following:

Proposed W astew ater Facility Charge Increases Phased-In Over 5 Y ears

| Residential Charges <br> - Per Unit | EDUs | Effective <br> Jan 1, 2012 | Effective <br> Jan 1, 2013 | Effective <br> Jan 1, 2014 | Effective <br> Jan 1, 2015 | Effective <br> Jan 1, 2016 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Single <br> Dwellings, including <br> Condominiums | 1 | $\$ 6,500$ | $\$ 7,600$ | $\$ 8,700$ | $\$ 9,800$ | $\$ 10,900$ |
| M ulti-Family <br> Dwellings | 0.9 | $\$ 5,900$ | $\$ 6,900$ | $\$ 7,800$ | $\$ 8,800$ | $\$ 9,800$ |

| Non-Residential <br> Charges - Per <br> water meter size | W ater <br> M eter <br> size <br> (inches) | EDUs | Effective <br> Jan 1, <br> 2012 | Effective <br> Jan 1, <br> 2013 | Effective <br> Jan 1, <br> 2014 | Effective <br> Jan 1, <br> 2015 | Effective <br> Jan 1, <br> 2016 |
| :--- | :---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Non-Residential <br> Accounts - All <br> Types | $5 / 8 \&$ <br> $3 / 4$ | 1.00 | $\$ 6,500$ | $\$ 7,600$ | $\$ 8,700$ | $\$ 9,800$ | $\$ 10,900$ |
|  | 1 | 1.67 | $\$ 10,900$ | $\$ 12,700$ | $\$ 14,600$ | $\$ 16,400$ | $\$ 18,200$ |
|  | 2 | 3.33 | $\$ 21,800$ | $\$ 25,400$ | $\$ 29,000$ | $\$ 32,700$ | $\$ 36,300$ |
|  | 3 | 10.00 | $\$ 65,400$ | $\$ 76,300$ | $\$ 87,200$ | $\$ 98,100$ | $\$ 109,000$ |

City Council requested Roger Null of Kennedy/Jenks be available to discuss alternative approaches to calculating wastewater facility charges. To facilitate this discussion, Kennedy/Jenks prepared a memo explaining the various approaches to calculating facility charges. Please see Attachment 3 for this memo. Roger Null of Kennedy/Jenks will be present on November 1 to answer any City Council questions.

Charges for Developments that Utilize Pressurized Toilet Flush Valves - Pressurized toilet flush (flushometer) val ves require a larger water supply line than conventional gravity tank flush toilets to maintain adequate water pressure and flow. This may lead a developer to install a larger water meter than if the developer had used conventional toilets. However, the actual wastewater volume generated by a pressurized toilet flush valve is the same as a conventional toilet. In such cases, wastew ater facility charges will be based on the water meter size that would normally be required if that developer had installed conventional toilets. In order to qualify for the lower wastewater facility charge, the developer must demonstrate, through calculations based on the California Plumbing Code, what the smaller water meter size would be. This has been clarified in the attached resolution. Facility Charge Study; NPDES Permit requirements, W ater Board Time Schedule Order; City Council Policy - requiring development impacts to be fiscally neutral, California Constitution Articles XIIIC and XIIID (Proposition 218).

FISCALIMPACT: At buildout, new development will have paid its share of wastewater system infrastructure costs, or approximately $\$ 86.5$ million.

Options: a. Approve Resolution No. 11-XX establishing W astew ater Facility Charges.
b. Approve Resolution No. 11-XX establishing W astewater Facility Charges, but with a modification to phase in the increases over five years instead of three.
c. Amend, modify, or reject the above option.

21 September 2011

Mr. Doug Monn
Director of Public Works
City of Paso Robles
1000 Spring Street
Paso Robles, California 93446
Subject: Final Report - Wastewater Facility Charge Study
K/J 0983010*10
Dear Mr. Monn:
Kennedy/Jenks Consultants is pleased to submit the Final Wastewater Facility Charge Study to the City of Paso Robles (City). By way of process, we have submitted this report as a digital ".pdf" file for your distribution within the City as appropriate.

This Facility Charge Study is a compilation of the analysis and findings of the City's wastewater system and the development and documentation of growth's fair share of system costs. The results of this evaluation are intended to provide the City with the nexus of cost and benefit in accordance with current requirements.

One important element of system cost is associated with funding the City's \$49 Million wastewater treatment plant upgrade. It is expected that the State Revolving Fund (SRF) Loan Program will be used to fund this project as it provides very favorable financing terms. However, since these funds are uncertain, an alternate, more conservative financial position is also examined herein. Summary tabular data associated with this financing mechanism is provided in the Table Section of this report.

It has been a pleasure working with you and City staff on this interesting project and we look forward to working with the City on future assignments. Please contact us if you have any questions or need additional information.

Very truly yours,
KENNEDY/JENKS CONSULTANTS

Roger Null, V.P.
Project Manager

## Section 1: Background

### 1.1 Background

The City of Paso Robles (City) levies a Wastewater Facility Charge (currently named Sewer Connection Fee) to recover the costs of new development's impact on the wastewater system. The purpose of this charge is to assure that future customers pay their fair share of system costs, both to recoup costs invested in the existing system and to finance future facilities needed to support growth. As such, a Facility Charge equitably distributes facility costs to future users based on their demands on the wastewater system. The assets that are used to collect, pump, and treat the City's wastewater are the basis for the costs of capacity in the wastewater system.

In recognition of the need to remain current and integrate the findings of the City's Sewer Collection System Master Plan dated January 2007 and proposed wastewater treatment plant upgrade, the City desires to update its Wastewater Facility Charges. This report is intended to update the current cost of wastewater system capacity, reflect these costs in the development of optional updated facility charges, and document these charges in conformance with the requirements of California Government Code Section 66000 et seq. Connection fees now in effect are based on the "Final Letter Report - Updated Water and Sewer Connection Fees" dated "May 24. 2004" prepared by "Foresight Consulting Services".

### 1.2 Regulatory Requirements

The regulations that govern "capacity charges" such as the Wastewater Facility Charge discussed herein generally fall into two areas: compliance with State government codes and adherence to City ordinances.

### 1.2.1 State Government Codes

California Government Code Sections 66013, 66016, 66022 and 66023 are the primary government code sections applicable to the development and recovery of "capacity charges". The focus of these sections is summarized below:

- The City must establish that the "capacity charge," in this case, the Capital Facility Charge does not exceed the estimated reasonable cost of capacity in facilities in existence or to be constructed for the benefit of the customer charged.
- The Capital Facility Charge revenues must be segregated from operating and maintenance funds and deposited in a separate fund.
- The City may only expend the revenues for the purpose for which the charges were collected.

In summary, these sections of Government Code suggest that the basis for facility charges be consistent with new development's impact on the cost of capacity in the City's wastewater system. It should be noted however, that the documentation and supporting nexus for deriving
the level of fair and equitable charges is not limited to a single criteria, acknowledging the fact that individual agencies may have unique circumstances that would result in charges that are fair and reasonable. Since the courts have approved assorted charge structures and methods over the years, there is a wide variation in the approach and method behind the development of these charges throughout California.

### 1.2.2 City Administrative Code

The legal authority applicable to current facility charges (connection fees) is contained in Ordinance 04-163, 04-231, and 05-025. The current charges are based upon a comparison of existing and build-out acreage with an "Equivalent Dwelling Unit (EDU)" factor applied to calculate incremental EDU's and a corresponding dollar value per EDU.

### 1.3 Current Connection Fees

In accordance with existing City ordinances, sewer connection fees effective July 1, 2009, are:

| Type of Development | Sewer <br> Connection Fee |
| :---: | :---: |
| Single Family Residence | \$5,467 |
| Multi-Family Residence | \$4,961 |
| Mobile Home Park | \$5,467 |
| Mobile Home Subdivision Lot | \$5,467 |
| Commercial/Industrial | \$5,467 |
| Hosp/Convalescent | \$5,467 + \$252 per room |
| Motel/Hotel | \$5,467 + \$102 per room |
| School | \$7,723 + \$102 per classroom |

## Section 2: Calculation Method

To calculate facility charges requires the selection of an appropriate calculation method and valuation approach. These are discussed below.

### 2.1 General Approach

There are two primary methods commonly used to develop facility charges:

- Incremental approach or,
- System capacity buy-in approach

While there are hybrids to these basic methods, these two methods represent the principal approaches and are discussed herein. The recommended approach is also provided at the conclusion of this section.

### 2.1.1 Incremental Approach

The incremental approach is based on quantifying the future costs of additional capacity and unitizing these costs by the incremental quantity of additional demand served by this capacity. The capital improvement program, derived from the City's Sewer Collection System Master Plan dated January 2007, provides the basis for costs and wastewater demand projections utilized in this approach.

### 2.1.2 Capacity Buy-In Approach

Similar to the incremental approach, the capacity buy-in approach is based on the cost of future wastewater system capacity, and unitizing these costs by the demand served by this capacity. However, the capacity buy-in approach includes the value of the existing system assets in the basis of costs. In doing so, the quantity of demand served by the value of the existing system plus the future costs of proposed capital improvements is represented by the total projected ultimate demand in the City's wastewater system.

### 2.1.3 Recommended Approach

The capacity buy-in approach was selected as the basis for developing the City's proposed updated Wastewater Facility Charges because it:

- It is consistent with other City policies and coincides with the City's adopted Water Capacity Charge methodology,
- Is easily understood,
- Provides a nexus between the cost of capacity and the proposed updated Wastewater Facility Charges, and
- Complies with current Government Code.

This approach was discussed with City staff and confirmed to be the appropriate method.
To utilize this approach, the value of the existing system must be derived, the costs of future system improvements included, and current and future flows estimated. These elements are addressed in the following sections.

### 2.2 Valuation Method

As previously discussed, there is substantial variation throughout California regarding the calculation of utility system value. It is common for an agency to develop a replacement cost for each asset based on current construction costs, as opposed to using the original value of booked assets from financial records. Thus, a Replacement Cost New (RCN) value of each asset is used as a primary element of the basis for deriving valuation.

In some cases, RCN values have been adjusted to account for how an asset was acquired by deducting the estimated value of contributed assets. Other agencies have accounted for asset wear-and-tear by deducting the level of accumulated depreciation. These and other methods produce "reasonable", and often similar, valuation results.

The City, like most other agencies in California, has established that a full RCN valuation does not produce reasonable results. Since the City's Geographic Information System (GIS) is the recognized record of wastewater utility asset information, this system is deemed to be the most accurate record of the age and extent of wastewater assets. It was used in the discounting method, providing a basis for the depreciation calculation to represent asset wear-and-tear. Accordingly, a Replacement Cost New Less Depreciation (RCNLD) method is utilized herein and is derived by incorporating the asset specific age and projected useful life with the replacement cost values. Cash and cash equivalents, which is also an enterprise asset, are also often included in the valuation. These assets have been omitted in this baseline utility valuation assessment.

An example of how the RCNLD method is calculated is: say an asset was installed 10 years ago for a cost of $\$ 100,000$. The replacement cost new (that is the cost to install that same asset today would be greater, as inflation) has increased its cost. Today, for example, the cost to install that same asset may be $\$ 130,000$. If however, the life expectancy of this type of an asset were say 50 years, then this asset has already reached 20\% of its useful life (10 years/50years), or $80 \%$ of its life is remaining. In this example, the RCNLD value is $\$ 104,000$ ( $\$ 130,000 \mathrm{x}$ 80\%).

## Section 3: Wastewater System Capacity Costs

A review of capital facilities was performed to develop and/or identify the costs of facilities used by future wastewater customers. Under the capacity buy-in approach, the cost of future capacity in the City's wastewater system is based on two primary components:

- the value of existing facilities, and
- the costs associated with needed improvements to expand or improve the system to meet build out conditions.

Each of these two cost elements is subdivided herein into three asset types:

1. collection system pipelines,
2. sewage lift stations, and
3. wastewater treatment plant facilities.

These elements are discussed in the following subsections.

### 3.1 Existing System Valuation

As discussed, the City's existing wastewater system is designed to collect and convey wastewater to the City-owned wastewater treatment plant on the north end of the City limits. Collection and conveyance is performed with a network of over 136 miles of gravity pipelines and supported by fourteen sewer lift stations. These facilities lift sewage to a higher elevation in the primary collection system trunk lines for conveyance to the wastewater treatment plant.

Information related to the size, age, material, and other specific information for each pipeline segment and lift station is maintained by the City through a GIS. This information as of August 2009 was the primary basis for the wastewater system asset inventory utilized in this study.

A summary of wastewater collection system pipeline inventory is provided in Table 1. As shown, over $57 \%$ of the City's collection system is 8 -inches in diameter, with $90 \%$ represented by 12 -inch diameter or smaller pipelines. Similarly, two-thirds of these pipelines are made of polyvinyl chloride (PVC), a widely used plastic piping material, and almost one-third is made with vitrified clay pipe (VCP), which has been in use for wastewater collection in the United States for over 150 years.

Valuation of each pipeline segment is based on its length, diameter, material, and age. This information, correlated to widely acceptable useful life criteria per material type and current construction unit costs, provides the basis for the RCNLD of each asset. A summary the City's wastewater pipeline system RCNLD value is shown in Table 2. As shown, the RCN value of the buried wastewater pipelines in the City is almost $\$ 190$ Million; the RCNLD value that incorporates depreciation is approximately $\$ 133$ Million. Supporting unit costs and useful life values are included in Appendix A, along with an asset register of approximately 2,900 wastewater pipeline segments that were used in support of this calculation.

The existing value of the City's wastewater lift stations and existing wastewater treatment plant is derived in a similar manner. The primary difference in valuation is based on differing cost parameters and the fact that some of these assets were constructed with borrowed funds. Since the City still has approximately $\$ 7$ Million remaining on that loan, this and other asset costs are combined to derive the value of these assets. The resulting value of these facilities is shown in Tables 3, 4, and 5. The sum of these asset values is approximately $\$ 13.8$ Million.

### 3.2 Future System Improvement Costs

Future wastewater capital improvements have been developed through several important studies, the City's Sewer Collection System Master Plan dated January 2007 and the Wastewater Treatment Plant Upgrade Facility Plan dated July 2009. These planning and subsequent design efforts have formalized the wastewater system's projected needs for collection, pumping and treatment to support build-out. The Master Plan's comprehensive capital improvement program (CIP) is shown in Table 6. As shown, the collection and pumping element of the CIP is estimated to cost approximately $\$ 32$ Million.

To meet regulatory requirements and long-term growth needs, the City must upgrade its wastewater treatment plant. The current engineer's cost estimate for this facility is
approximately $\$ 49.6$ Million in January 2014 dollars. Two options to fund the construction of the plant are under consideration.

- The preferred financing approach is a State Revolving Fund (SRF) loan. This very low interest loan is designed to help communities with just such a need. As shown in Table 7, the total cost of the new wastewater plant including interest is approximately $\$ 66,600,000$. As indicated, since Templeton Communities Services District (TCSD) has a $9 \%$ entitled capacity share, their share of the upgraded plant has been deducted from the City's system value. A summary of value of the City's wastewater utility for SRF financing is shown in Table 8.
- It should be noted however, that there is no guarantee that a low-interest State loan will be available. To provide a financial safety net, a financial scenario was developed that presumes SRF funding will not be available. Under this condition, conventional borrowing will be required to upgrade the wastewater treatment plant at higher interest rates, increased annual debt service payments, and an accelerated need for increased revenues to meet those costs. Tabulation of Facility Charges based on conventional financing is listed in a later section of this report.

Further, note that identified future system components are primarily trunk lines and other facilities that serve the broader community. Individual developments may still be required to construct system components that primarily serve that development. Such conditions of approval are developer-financed and are in addition to the community-wide contributions reflected in utility connection fees.

Last, the City's "Water Resources Plan Integration and Capital Improvement Program" dated February 2007 and the "2010 Urban Water Management Plan" identify recycled water as future components of the City's water resource portfolio. Costs of additional wastewater treatment and recycled water distribution are omitted from this calculation of wastewater facility charges. The financial structure for recycled water will be put into place as plans advance for bringing this water resource on-line.

## Section 4: Projected Wastewater Discharge

As previously discussed, the selected capacity buy-in approach typically uses ultimate discharge for the calculation of the unit cost of capacity. For example, a system component with an estimated asset value of $\$ 5$ Million could provide capacity to serve 15,000 equivalent dwelling units. So, the unit cost is $\$ 333$ per equivalent dwelling unit. If 10,000 dwellings exist, then each of the 5,000 additional units would pay $\$ 333$ each as part of this asset buy-in.

Accordingly, the quantity of new wastewater demands is an important consideration in the development of the City's updated Capital Facility Charges.

The current wastewater discharges are based on metered readings of wastewater discharged to the City's wastewater treatment plant. The existing discharges and build-out discharges as stated in the "City of Paso Robles Wastewater Treatment Plant Facility Plan" dated July 2009 are referenced herein. Flow estimates have been unitized per single family residential dwelling unit (Table 9).

The wastewater flow per equivalent dwelling unit (EDU) is calculated based on several key values derived in the City's 2009 Facility Plan. The first component is the flow per person. This value is based on the City's existing flow of 2.81 MGD ( $2,810,000$ gallons per day), $80 \%$ of which is residential contribution, and an existing population of 30,072 people $^{1}$. The second component is the average number of persons residing in a single family dwelling unit. The City Community Development Department estimates a population per household of 2.7 persons ${ }^{2}$. Based on these values, the demand associated with one dwelling unit (DU) is calculated as follows:
2.81 MGD/30,072 people $\times 80 \%=74$ gallons/person $\times 2.7 \mathrm{pph}=\mathbf{2 0 0}$ gallons/DU = $\mathbf{1}$ EDU

At this equivalent flow rate, an estimated 14,040 EDUs comprise the City's current customer base, projected to increase to 21,985 EDUs at build-out (Table 9).

## Section 5: Proposed Wastewater Facility Charges

The updated Wastewater Facility Charge is calculated by correlating the costs to serve future growth with the projected ultimate demands on the wastewater system. As such, the wastewater system value (Table 8) is divided by the projected ultimate discharge (Table 9) to derive a base unit cost of capacity. The result of this unit calculation for SRF financing is shown in Table 10. As shown, the unit cost of new capacity for the City's wastewater system is \$54,500 per 1,000 gallons/day, or \$10,900 per EDU.

Consistent with the City's current Sewer Connection Fee, a multifamily residential (MFR) unit's wastewater discharge is approximately 90\% of a typical SFR unit. A 0.9 EDU has a resulting charge of \$9,800 per dwelling unit.

As previously described, 1 EDU is equivalent to the average wastewater discharged from a single family residential (SFR) account. Proposed charges for other customer classes are derived in a similar manner. The results of this assessment for SRF financing are also provided in Table 10.

The existing fee structure adopted by Council in 2004 for non-residential customers is a "base plus incremental fee approach". The proposed non-residential charges in Table 10 are based primarily on water meter size. The proposed Wastewater Facility Charges increase with the size of the water meter to recover the additional costs that larger water users/dischargers have on system capacity. The capacity ratio factors used herein are based the ratios provided in AWWA Manual M6: Water Meters - Selection, Installation, Testing and Maintenance.

The water meter capacity ratio method provides an equitable means of estimating wastewater discharge, is simple for the City to administer, and is consistent with many other California communities. A comparison of wastewater capacity charges for other similar communities is provided in Appendix A.

[^0]Note that the nexus between water meter size and probable impact on the City's wastewater system is clear for most non-residential sewer customers. Relatively large dischargers (larger than 3 -inch water meter) may need further evaluation ${ }^{3}$. As such, facility charges for NonResidential accounts requiring larger than 3-inch water meters will be based on plumbing fixture requirements of the most current edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf \& Eddy's "Wastewater Engineering". The facility charge will be based on the resulting estimate of wastewater generation, expressed in terms of equivalent dwelling units (EDUs) times the charge per EDU in effect at that time. However, in no case shall the facility charge be less than that associated with a 3-inch water meter. Currently, 200 gallons of wastewater generation per day equates to one equivalent dwelling.

Consistent with other utility rates and charges, the proposed charges are phased in over the next several years. Proceeding in this methodical way will enable proposed new development to better plan for future project costs of wastewater system capacity. Low interest SRF financing would support phasing in Facility Charges as is shown in Table 11.

As for the cost of the upgraded treatment plant with conventional financing, Table 12 lists the estimated costs under that financing option along with the associated alternative facility charges, Tables 13 and 14. Selection of wastewater facility charges and wastewater rates will be considered by City Council in the coming months.

It is recommended that the City adopt increased Wastewater Facility Charges so that growth costs are adequately recovered from future wastewater system customers. As system values and discharge characteristics change, these charges must be updated from time to time to reflect then current conditions and projected values.

# Table 7 <br> WWTP Valuation - New Facility Upgrade Project 

| Wastewater Treatment Plant (WWTP) Summary Information |  |
| :---: | :---: |
| Financing Criteria (a) |  |
| Amount of Issue | \$47,757,000 |
| Interest Rate (SRF) | 3.4\% |
| Term (Yrs) | 20 |
| Total Annual Debt Service (b) | \$3,330,000 |
| Proposed Bonded Debt Service |  |
| Debt Service Pmt | \$3,330,000 |
| TCSD Share (@ 9\%) | \$299,700 |
| Net Paso Robles Share | \$3,030,300 |
| Estimated Total Project Costs |  |
| Total Costs of New WWTP | \$66,600,000 |
| TCSD Share (@ 9\%) | \$5,994,000 |
| Net Paso Robles Share | \$60,606,000 |

(a) Assumes SRF Financing, minimal issuance costs.
(b) Includes principal and interest.

Note: Values are rounded.

## Table 8 <br> Wastewater System Valuation Summary

| Description | Replacement <br> Cost New | Accumulated <br> Depreciation | Replacement Cost <br> New Less <br> Depreciation |
| :---: | :---: | :---: | :---: |
| Existing Facilities/Assets |  |  |  |
| Collection System | $\$ 189,617,900$ | $\$ 56,528,100$ | $\$ 133,089,700$ |
| Pumping System | $\$ 3,570,100$ | $\$ 1,501,100$ | $\$ 2,069,000$ |
| WWTP Cash-based Assets | $\$ 1,215,400$ | $\$ 996,700$ | $\$ 218,700$ |
| WWTP Debt-based Assets | $\$ 12,579,081$ |  | $\$ 11,579,081$ |
| Subtotal | $\$ 205,982,481$ | $\$ 59,025,900$ | $\$ 146,956,481$ |
| Future Facilities |  |  |  |
| Total City CIP (Less New WWTP) | $\$ 31,911,300$ | na | $\$ 31,911,300$ |
| WWTP (City Only Costs, Including Debt) | $\$ 60,606,000$ | na | $\$ 60,606,000$ |
| Subtotal | $\$ 92,517,300$ | na | $\$ 92,517,300$ |
| Total Wastewater System Value | $\$ 298,499,800$ | - | $\$ 239,473,800$ |

Note: Estimated annual pipeline depreciation is approximately $\$ 2.5$ Million per year.

## Table 9 Wastewater System Discharge Summary

| Description | Discharge Values |
| :--- | :---: |
| Existing Flows |  |
| Current WWTP Avg. Flow (mgd) (a) | 3.0 |
| Templeton CSD Avg. Flow (mgd) (b) | 0.192 |
| Existing City Wastewater Flow (mgd) | 2.81 |
| Future Flows |  |
| Buildout WWTP Flow (mgd) (c) | 4.84 |
| Contractual Templeton CSD Flow (mgd) | 0.443 |
| Projected City Wasewater Flow (mgd) | 4.397 |
| Growth's Use of Future System |  |
| Percent of Capacity for Growth | $\mathbf{3 6 . 1 \%}$ |
| Cost Allocated to Growth | $\$ 86,541,700$ |
| Single Family Discharge (gpd) = 1 EDU | 200 |
| Existing PR System Discharge (edus) | 14,040 |
| Future System Discharge (edus) | 21,985 |
| Net Increase (edu's) | 7,945 |

Note: Estimated annual pipeline depreciation is approximately \$ 2.5 Million per year.
(a) Average of 2006 through 2010 WWTP flows.
(b) Templeton CSD's average flow from January 08' to December 10'. July 2009. Includes contribution from a 1,500 person California Youth Authority facility.
(c) Table 3-15 of "City of Paso Robles Wastewater Treatment Plant Upgrade Facility Plan", July 2009. Includes contribution from a 1,500 person California Youth Authority facility.

Table 10
Proposed Wastewater Facility Charges

| Description |  | Proposed Facility Charges |  |
| :---: | :---: | :---: | :---: |
| Proposed Facility Charges |  | Discharge Values |  |
| Total System Value |  | \$239,473,800 |  |
| Total Discharge - 1,000 gpd |  | 4,397 |  |
| Total Discharge - EDU's |  | 21,985 |  |
| System Capacity Cost (\$/1,000 gpd) |  | \$54,500 |  |
| System Capacity Cost (\$/edu) |  | \$10,900 |  |
| Residential Charges - Per Unit | gpd/DU (b) | EDUs | Proposed Charges |
| Single Family Dwelling | 200 | 1 | \$10,900 |
| Multi Family Dwelling | 180 | 0.90 | \$9,800 |
| Non-Residential Charges - Per Meter Size | Meter Size | EDUs * | Proposed Charges |
| Non-Residential Account - All Types | $5 / 8$ \& 3/4 | 1.00 | \$10,900 |
|  | 1 | 1.67 | \$18,200 |
|  | 1.5 | 3.33 | \$36,300 |
|  | 2 | 5.33 | \$58,100 |
|  | 3 | 10.00 | \$109,000 |

* Where the EDU ratio/meter size is equal to Water Meter Capacity Ratio; Charges for meters greater than 3-Inch will be based on plumbing fixture requirements of the most recent edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf and Eddy's "Wastewater Engineering".
Table 11
Proposed Wastewater Facility Charges Phasing Schedule

| Description |  | Proposed Facility Charges |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Residential Charges - Per Unit | gpd/DU (b) | FY 11-12 <br> Charge/Dwelling Unit | FY 12-13 <br> Charge/Dwelling Unit | FY 13-14 <br> Charge/Dwelling Unit |
| Single Family Dwelling Multi Family Dwelling | 200 180 | \$7,300 $\$ 6,570$ | $\begin{aligned} & \$ 9,100 \\ & \$ 8,190 \end{aligned}$ | $\begin{gathered} \$ 10,900 \\ \$ 9,800 \end{gathered}$ |
| Non-Residential Charges - Per Meter Size * | Meter Size | Charge/Meter Size | Charge/Meter Size | Charge/Meter Size |
| Non-Residential Account - All Types | $5 / 8$ \& $3 / 4$ | \$7,300 | \$9,100 | \$10,900 |
|  | 1 | \$12,200 | \$15,200 | \$18,200 |
|  | 1.5 | \$24,300 | \$30,300 | \$36,300 |
|  | 2 | \$38,900 | \$48,500 | \$58,100 |
|  | 3 | \$73,000 | \$91,000 | \$109,000 |

Notes: Charges are scheduled to be effective July 1 of each Fiscal Year.

* Charges for meters greater than 3-Inch will be based on plumbing fixture requirements of the most recent edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf and Eddy's "Wastewater Engineering".

Table 12
WWTP Valuation - Conventional Financing

## Wastewater Treatment Plant (WWTP) Summary Information

Financing Criteria (a)

| Amount of Issue | $\$ 55,057,000$ |

## Table 13

Alternative Wastewater Facility Charges - Conventional Financing

| Description |  | Proposed Facility Charges |  |
| :---: | :---: | :---: | :---: |
| Proposed Facility Charges |  | Discharge Values |  |
| Total System Value |  | \$284,581,600 |  |
| Total Discharge - 1,000 gpd |  | 4,397 |  |
| Total Discharge - EDU's |  | 21,985 |  |
| System Capacity Cost (\$11,000 gpd) |  | \$64,700 |  |
| System Capacity Cost (\$/edu) |  | \$12,900 |  |
| Residential Charges - Per Unit | gpd/DU (b) | EDUs | Proposed Charges |
| Single Family Dwelling | 200 | 1 | \$12,900 |
| Multi Family Dwelling | 180 | 0.90 | \$11,600 |
| Non-Residential Charges - Per Meter Size | Meter Size | EDUs * | Proposed Charges |
| Non-Residential Account - All Types | $5 / 8$ \& 3/4 | 1.00 | \$12,900 |
|  | 1 | 1.67 | \$21,500 |
|  | 1.5 | 3.33 | \$43,000 |
|  | 2 | 5.33 | \$68,800 |
|  | 3 | 10.00 | \$129,000 |

Note: Alternative facility charges assumes SRF funds are not available and conventional financing is required; Aug 2011.

* Where the EDU ratio/meter size is equal to Water Meter Capacity Ratio; Charges for meters greater than 3-Inch will be based on plumbing fixture requirements of the most recent edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf and Eddy's "Wastewater Engineering".
Table 14
Alternative Wastewater Facility Charges - Conventional Financing Phasing Schedule

| Description | Proposed Facility Charges |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | FY 11-12 | FY 12-13 | FY 13-14 |
| Residential Charges - Per Unit | gpd/DU (b) | Charge/Dwelling Unit | Charge/Dwelling Unit | Charge/Dwelling Unit |
| Single Family Dwelling | 200 | \$7,900 | \$10,400 | \$12,900 |
| Multi Family Dwelling | 180 | \$7,110 | \$9,360 | \$11,600 |
| Non-Residential Charges - Per Meter Size | Meter Size | Charge/Meter Size | Charge/Meter Size | Charge/Meter Size |
| Non-Residential Account - All Types | $5 / 8$ \& 3/4 | \$7,900 | \$10,400 | \$12,900 |
|  | 1 | \$13,200 | \$17,300 | \$21,500 |
|  | 1.5 | \$26,300 | \$34,700 | \$43,000 |
|  | 2 | \$42,100 | \$55,500 | \$68,800 |
|  | 3 | \$79,000 | \$104,000 | \$129,000 |

Notes: Charges are scheduled to be effective July 1 of each Fiscal Year.

* Charges for meters greater than 3-Inch will be based on plumbing fixture requirements of the most recent edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf and Eddy's "Wastewater Engineering".

| 30 | \$616 | \$716 | \$758 |  |  |
| 36 | \$775 | \$901 | \$967 |  |  |

(a) Piping Improvement Projects Cost Criteria - City of El Paso De Robles Sewer Collection System Master Plan, January 2007. 4" and 6" costs are interpolated. Sited costs per foot are for PVC.
(b) Escalated per ENR Construction Cost Index - June 2006-January 2011.
(c ) Based on installed pipe costs for PVC in Sewer Master Plan. Adjusted per ENR and for materials cost difference betweem PVC and VCP.
(d) Source: General estimates based on manufacturer's claims and typical field results. Life expectancy values may vary depending on internal and external corrosive conditions and protections. AC, DI, Steel, and Transite are assumed to be lined.

## RESOLUTION NO. 11xx

## RESOLUTION OF THE CITY COUNCIL OF THE CITY OF EL PASO DE ROBLES APPROVING REVISED WASTEWATER FACILITY CHARGES

WHEREAS, the City of Paso Robles operates a wastewater collection, treatment, and disposal system that is available to serve existing residents and new development alike; and

WHEREAS, the City retained the firm of Kennedy/ Jenks Consultants to undertake a comprehensive review of the City's wastewater facility charges, which was presented to the City Council on September 6, October 4, October 18, and November 1, 2011; and

WHEREAS, Kennedy/Jenks Consultants determined that revenues generated by the existing wastewater connection fees (i.e. wastewater facility charges) are inadequate to pay for new development's proportional costs of system improvements which are necessary to sustain operations in compliance with the Regional Water Q uality Control Board's Time Schedule O rder No. R3-2011-0213 and other requirements; and

WHEREAS, in accordance with state law, copies of the report prepared by Kennedy/ Jenks Consultants, dated September 21, 2011, have been and are available for public review and copying; and

WHEREAS, a phased facility charge increase will provide the necessary revenues to provide a reliable, wellmaintained infrastructure system to serve community needs; and

WHEREAS, on September 6, 2011, City Council instructed staff to send out advance notices regarding consideration for adoption of revised wastewater facility charges; and

WHEREAS, notices and information regarding the $O$ ctober 4 and November 1, 2011, public hearings on the adoption of the proposed wastewater facility charges, in compliance with the requirements of Government Code Section 66016, were published in a newspaper of general circulation and sent to interested parties;

## NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF EL PASO DE ROBLES DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. The City Council finds that all of the above recitals are true and correct and are incorporated herein by reference.

SECTION 2. The City Council of the City of El Paso de Robles hereby approves and adopts the schedule of wastewater facility charges, attached hereto as Exhibit A and incorporated herein by reference, to become effective January 1, 2012. All permittees must pay the entire amount of the fee in effect at the time of issuance of building permit, taking into account credit for any amounts paid prior to building permit issuance:

SECTION 3. The City Council of the City of El Paso de Robles hereby finds and determines that the proposed wastewater facility charges do not exceed the estimated reasonable cost of providing the service for which the fee is to be charged. This finding is based on the study conducted by Kennedy/ Jenks Consultants, dated September 21, 2011, and incorporated herein by reference, the staff report and other testimony and information presented at the public hearing.

SECTION 4. The City Council finds, under Public Resources Code section 21080(b)(8) and Title 14 of the California Code of Regulations, Section 15273 (a) that this Resolution is exempt from the requirements of the California Environmental Quality Act ("CEQA") in that it is not a "project," but instead consists of the modification, restructuring and approval of rates which are for the purpose of meeting the City's expenses for
capital projects necessary to maintain service within existing service areas. The City Council therefore, directs that a Notice of Exemption be filed with the County Clerk of the County of San Luis Obispo in accordance with CEQA Guidelines.

SECTION 5. That said wastewater facility charges shall be reviewed no less than biennially (every two years) in conjunction with the update of the City's four-year financial plan to ensure that the wastewater facility charges then in existence do not exceed the estimated reasonable cost of providing the public facilities and services for which they are imposed.

PASSED AND AD OPTED by the City Council of the City of El Paso de Robles this 1st day of November 2011.

AYES:
NOES:

ABSENT:

ATTEST:

Caryn Jackson, D eputy City Clerk

## ExhibitA

## WASTEWATER FACILITY CHARGE SCHEDULE

| Residential Charges <br> - Per Unit | Equivalent <br> Dwelling <br> Units (ED Us) | Charges <br> effective Jan 1, <br> 2012 | Charges <br> effective Jan 1, <br> 2013 | Charges <br> effective Jan 1, <br> 2014 |
| :--- | ---: | ---: | ---: | ---: |
| Single Family <br> including Condominiums | 1 | $\$ 7,300$ | $\$ 9,100$ | $\$ 10,900$ |
| Multi-Family Dwellings | 0.9 | $\$ 6,570$ | $\$ 8,190$ | $\$ 9,800$ |

| Non-Residential <br> Charges - Per water <br> meter size | Water Meter <br> size (inches) | ED Us | Charges <br> effective Jan <br> 1,2012 | Charges <br> effective Jan <br> 1,2013 | Charges <br> effective Jan <br> 1,2014 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Non-Residential <br> Accounts - All Types | $5 / 8 \& 3 / 4$ | 1.00 | $\$ 7,300$ | $\$ 9,100$ | $\$ 10,900$ |
|  | 1 | 1.67 | $\$ 12,200$ | $\$ 15,200$ | $\$ 18,200$ |
|  | 1.5 | 3.33 | $\$ 24,300$ | $\$ 30,300$ | $\$ 36,300$ |
|  | 2 | 5.33 | $\$ 38,900$ | $\$ 48,500$ | $\$ 58,100$ |

For the purposes of assessing wastewater facility charges, N on-Residential A coounts are any acoounts not specifically noted as Residential herein. N on-Residential A coounts indude Industrial U sers as defined per Section 14.08.040 of the M unicipal Code.
M ulti-F amily D wellings, as defined in the Paso Robles G eneral Plan L and U se E lement, refers to buildings that comprise two or more dwelling units under common ownership; apartment complex es to be charged as M ulti-F amily dwelling unit. C ondominiums are residential units titled under separate ownership with underlying paroel under ommon ownership. C ondominium units served by individual water meters, mobile homes, prefabricated homes, and planned community of detached homes shall be charged as Single F amily D wellings.

For the purposes of assessing wastewater facility charges, the following development types are considered Non-Residential and shall be charged based on water meter size:

- Long-term care facilities;
- Hotels;
- Recreational vehicle parks; and
- Other developments with transient occupancy.

## Facility Charges for Large Non-Residential Accounts:

Facility charges for Non-Residential accounts requiring water meters larger than 3-inches will be based on plumbing fixture requirements of the most current edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf \& Eddy's W astewater E ngineering. The facility charge will be based on the resulting estimate of wastewater generation, expressed in terms of equivalent dwelling units (EDUs) times the charge per EDU in effect at that time. However, in no case shall the facility charge be less than that associated with a 3 -inch water meter. Currently, 200 gallons of wastewater generation per day equate to one equivalent dwelling unit.

Facility Charges for Non-Residential Accounts Not Receiving City Water:
Facility charges for Non-Residential accounts that receive water service from a non-City source shall be based on either a) the water meter size associated with the non-City source, or b) plumbing fixture requirements of the most current edition of the California Plumbing Code and the wastewater generation factors in the most current edition of Metcalf \& Eddy's W astewater E ngineering. The facility charge will be based on the resulting estimate of wastewater generation, expressed in terms of equivalent dwelling units (EDUs) times the charge per EDU in effect at that time. However, in no case shall the facility charge be less than that associated with one EDU.

Secondary D welling Units: Facility charges for secondary dwelling units added to Single Family-zoned properties shall be assessed the Multi-Family D welling facility charge then in effect.

Conversion of Property Use: Additional facility charges shall be assessed when intensification or conversion of a property use requires an additional non-irrigation water meter, or meters, or an increase in the size of an existing water meter. Credit shall be given for the existing water meter based on the facility charge then in effect, but in no case shall a facility charge refund be administered for a decrease in the size of an existing water meter.

Developments that Utilize Pressurized Toilet Flush Valves: Pressurized toilet flush (flushometer) valves require a larger water supply line than conventional gravity tank flush toilets or air-assisted flush tank toilets to maintain adequate water pressure and flow. This may lead a developer to install a larger water meter than if the development had conventional toilets. In such cases, wastewater facility charges will be based on the water meter size that would normally be required if that development had conventional toilets. In order to qualify for the lower wastewater facility charge, the developer must demonstrate through calculations based on the California Plumbing Code what the smaller water meter size would be.

## 24 October 2011

Mr. Doug Monn

Director of Public Works
City of Paso Robles
1000 Spring Street
Paso Robles, California 93446

Subject: Wastewater Facility Charge Study - Alternative Methods K/J 0983010*10

Dear Mr. Monn:
Per your request, we have prepared a brief discussion of alternative methods typically used to develop and administer facility charges. As we understand it, the purpose of this discussion, provided as Attachment A , is to provide some additional information on the applicability of the different methods, why the Capacity Buy-In Approach has been developed for the City's Wastewater Facility Charges, and what other options may now be available to the City.

This memo is not intended to describe all possible alternative methods if the City was starting from scratch. Rather, its purpose is to provide additional background regarding the proposed and other alternative methods and their relative usefulness with respect to the City's current position, as documented by Kennedy/Jenks Consultants in our Final Wastewater Facility Charge Study, dated September 6, 2011.

I hope the City finds the attached information helpful. Please contact us if you have any questions or need additional information.

Very truly yours,
KENNEDY/JENKS CONSULTANTS

Roger Null, V.P.
Project Manager

## Attachment A Utility Facility Charges (Connection Fees) - An Overview

Communities throughout the U.S.A. charge water and sewer facility capacity charges to recover the costs of new development's impact on local utility systems. The purpose of this charge is to assure that future customers pay their share of system costs, both to recoup costs invested in oversizing the existing system and to pay for future facilities needed to support growth.

Without these charges, existing utility customers would bear the financial burden of oversized systems, thereby subsidizing growth.

California Government Code Sections 66013, 66016, 66022 and 66023 are the primary statutes applicable to the development and recovery of "capacity charges" (historically known as connection fees). The focus of these code sections is summarized below:

- Communities must establish a "capacity charge" that is no more than the estimated cost of providing capacity in facilities in existence or to be constructed for the benefit of the customer charged.
- Revenues from those charges must be segregated from operating and maintenance funds and deposited in a separate fund.
- Those revenues may only be expended for the purpose for which the charges are collected.

These sections of Government Code indicate that utility facility charges should reflect new development's impact on the cost of capacity in a utility system. It should be noted however, that the documentation and supporting nexus for deriving the level of charges is not limited to a single method, acknowledging the fact that individual communities have unique circumstances that would result in charges that are appropriate to, and representative of, those circumstances. Courts have approved different charge structures and methods over the years such that there is variation in the approach and method.

The purpose of this memo is to describe alternative methods for determining utility connection fees and to render an opinion as to situations where each is appropriate. In addition, the City of Paso Robles' current situation with regard to wastewater facility charges and user rates is described along with the recommended charges.

## 1. Methods of Determining Facility Charges

Approaches to determining utility facility capacity charges range from a basic "incremental expansion" approach to a "capacity buy-in" (i.e. reimbursement) approach to a "plan-based" approach as follows:
a. Incremental Expansion Approach

Under this approach, capacity charges would be determined based only on future facilities needed to serve growth; it views existing facilities (pipes, pumps, treatment plants, etc.) as only benefiting existing customers.

The Incremental Expansion Approach does not recognize available system capacity as providing value; it looks only at future capital expenditures and the capacity these new facilities provide. Due to this restrictive view of system value, this approach usually results in the lowest capacity charges, which is why it is the method most favored by new development.

The Incremental Expansion Approach is sometimes appropriate in planned communities that face high growth rates and where the existing system is only a fraction of the planned system; i.e., in circumstances where development must pay for, build and primarily use the main line capacity required. However, this method is rarely used today under any circumstances, and almost never used for mature communities.

## b. Capacity Buy-In or Reimbursement Approach

Under this method, capacity charges are determined based both on future facilities needed to serve growth and the excess/available capacity already built into the existing pipes, pumps, and treatment plants. The fundamental difference then between the Capacity Buy-In and the Incremental Expansion Approach is that Capacity Buy-In acknowledges that:

- there is available capacity in the system, (otherwise the proposed connection could not be served);
- this available capacity provides value to growth (otherwise new development would have to build new facilities); and
- existing customers (who paid for the existing public utility system) are entitled to be reimbursed by growth for the available capacity that was installed on growth's behalf.

Developers often suggest that it is development that has paid for excess capacity. In reality however, facility charges are usually inadequate to fund the facility oversizing needed for growth. Therefore existing customers advance the costs for these facilities through the steady cash flow generated from user charges. Current customers are the group that stands to be reimbursed.

The Capacity Buy-In (Reimbursement) Approach is by far the predominant method of determining facility charges in California today, largely because most established communities now have mature utility systems with excess capacity to serve growth; this built-in capacity has value, and growth should reimburse ratepayers for installing a system that is ready to serve them. If ratepayers were not reimbursed, they would be considered to be subsidizing growth.
c. Plan-Based Approach

Both methods described above assume that the charge is determined on a community-wide basis. Another approach is to calculate charges by benefit areas. This approach identifies individual "zones of benefit" so that fees for each zone are based on an assessment of the cost of providing utility service to that area. Typically reserved for very large communities or those that have separate utility systems, the Plan-Based Approach requires calculating area-specific flows and growth potential matched up with area-specific estimated costs. It is administratively burdensome, can have an indirect effect on property values, fosters divisiveness within a community, and typically requires periodic re-examination, thereby creating a multitude of rates and charges as the calculations become more particularized for smaller zones of benefit. Its application is generally limited to the same conditions where the Incremental Expansion Approach is appropriate. Table 1 illustrates the three methods described above.

## Table 1 <br> Sample Home Town, U.S.A

## 2. Valuations

In addition to varying methods for determining utility facility charges, various methods for estimating existing and future asset values can be followed.

Future asset values, such as for planned pump stations or treatment plants, are estimated based on an engineer's estimates of similar facility costs, usually escalated to the planned year of construction. The accuracy of future asset cost estimates depends upon the extent of planning/design work performed and future market conditions, among other factors.

There are several ways to estimate the value of excess capacity in existing utility systems. However, inherent in each valuation approach is a comprehensive system inventory and determination of excess capacity by component. For example, a community's wastewater system can include hundreds of miles of sewage lines plus pump stations, manholes, treatment plants, and disposal facilities. The components can vary in age and type (PVC pipe vs. AC pipe, for example). The more complete a community's asset inventory is, the more precisely its estimated value can be measured.

For the Capacity Buy-In, Reimbursement Approach, the system's excess capacity must also be established. This is customarily done by utility modeling/master planning and provides the basis for the future system capital improvement program, the primary element of future system asset valuation.

One other aspect of system valuation is the basis for deriving system value. In performing a system valuation, several fundamental questions must be answered:
> How accurate is our fixed asset inventory of utility assets?
$>\quad$ Which assets should be included in value -- all assets including cash reserves?
$>\quad$ Should there be an appraisal of all utility-owned property so it can be included?
$>\quad$ Is original installation cost or replacement cost more appropriate in asset valuation?
> Should replacement cost be adjusted for depreciation?
Experts use various approaches. California courts recognize all as viable, if they are supported by documentation and reasonable analysis. For Paso Robles, Kennedy-Jenks Consultants advises using replacement cost at today's market conditions less depreciation to determine wastewater facility charges. The primary reasons for this are that (1) the City maintains a fairly comprehensive asset inventory; and (2) depreciating the value avoids over-stating the excess capacity value to growth. The Replacement Cost New Less Depreciation approach is widely used by public agencies throughout the U.S. and is also recognized by the California Public Utilities Commission as a valuation approach for the appraisal of regulated private utility companies subject to public acquisition.

## 3. Method Appropriate for Paso Robles

So, what is the appropriate method for determining wastewater facility charges for Paso Robles? The relevant factors are:
a. The sewer system is well-established and tens of millions of dollars have been invested in building excess capacity for planned growth; and
b. Paso Robles' sewer system is fully integrated and all wastewater is sent to one treatment plant via a series of main trunk lines; and
c. The City maintains a good fixed asset inventory upon which to estimate the value of the existing system; and
d. The City's wastewater collection system master plan and computer model were last updated in 2007, providing a basis for estimating excess capacity; and
e. On September 6, 2011, the Council approved proposing wastewater rates that were based, in part, on anticipated reimbursement from growth through updated wastewater Facility charges, and .
f. Water facility charges (adopted in 2009) were based on the Capacity Buy-In, Reimbursement Approach.

Based on all of the above, it is Kennedy/Jenks opinion that the Capacity Buy-In, Reimbursement Approach is the most appropriate method to follow for the City's Wastewater Facility Charges.

## 4. Options for Consideration

While the previous sections have discussed the different methods for developing facility charges and why the Capacity Buy-In, Reimbursement Approach is recommended, the Council may consider a variation to the proposed wastewater facility charges.

For example, the facility charges could be phased-in in over five years rather than three, as currently proposed. The three-year phasing plan was recommended for wastewater so that it, too, would be at full level at the same time as water charges. However, a five-year phasing plan in a manner similar to water would also be reasonable, although it may adversely affect the City’s Sewer Fund should the California Department of Corrections facility require capacity prior to FY 15-16. ${ }^{1}$

Another option that does not appear to alter the established allocation of costs between existing customers and new development would be a Plan-Based Approach combined with Capacity Buy-In. This would likely result in average facility charges comparable to what is currently proposed. Such a regional benefit overlay would segregate the value of the existing system and the associated Capital Improvement Program by benefit area.

Moreover this approach would likely have several negative impacts (administrative complexity, effect on property values, etc.) that could outweigh the positives. Significant additional work would be required to complete this asset-specific assessment and probably necessitate a similar study for the water utility for consistency.

One other option may be available. Staff is currently reviewing water billing information to assess whether a lower wastewater flow per equivalent dwelling unit ("EDU") may be warranted. A lower flow per EDU would likely reduce the average residential facility charges.

[^6]The Kennedy/Jenks study was based on data from existing planning studies (the 2007 Master Plan, 2009 Wastewater Facility Plan Report), and the growth demands projected in the Water Facility Charge Study, which supported a 200 gallon per day value. Based on discussions with staff, Kennedy/Jenks recommends that the City study water usage for one additional winter water billing period to see if a lower flow per EDU would be justified in setting facility charges.

Finally, as the Council knows, Templeton Community Services District has stated it intends to disconnect from the City wastewater system and redirect its flows to its own system. Should that occur within 5 years, there will be a need to re-evaluate the City's facility charges and wastewater rates for adequacy and appropriateness. As such, the facility charges may need re-adjustment in the near future to reflect this significant change in service demands.

## 5. Summary

Utility facility charges are levied to recover the costs of new development's impact on local utility systems. Paso Robles’ wastewater system is well-established and excess capacity has been paid for by existing customers in anticipation of growth. The sewer system is integrated with all flow entering a single wastewater treatment plant via a single trunk line network, discharging at a single point. Proposed wastewater user rates were developed based on certain shared costs between both users and growth, just like water rates. Changing to a method that lowers long-term wastewater facility charges now would shift costs to existing users and could raise user fees.

Moreover, altering the method used to derive wastewater charges could necessitate the need to alter the method used for water facility charges, with similar results on the Water Fund.

Given this, it is my professional opinion that the Capacity Buy-In, Reimbursement Approach is the appropriate method for determining wastewater facility charges for Paso Robles and should continue to be used for valuing its utility systems.

> About the Author: Roger Null is Vice President of Kennedy/Jenks Consultants, Inc., with more than 30 years experience in cost allocation and utility rate assessments. He was initially trained in cost allocation while employed with Union Carbide Corporation, a Fortune 500 company, and began his career in utility ratemaking while employed by the City of Dallas, one of the ten largest cities in the U.S. During his 25 years with Kennedy/Jenks, Mr. Null has been involved in over 100 rate studies, 40 master plans, depreciation studies, asset inventories, and has performed the valuation and appraisals of private water systems for acquisition by local public agencies. He is noted as a leading professional in the field of utility rate studies and financial planning.
> Because of this, Mr. Null was listed as one of a handful of individuals/firms in California by Concerned Citizens of Paso Robles in 2008 when that group was pushing for an independent assessment of water rates.
> Mr. Null's role in Paso Robles is to assist in solving complex utility management problems, and to serve as a trusted advisor - not policy maker. He remains dedicated to developing a rate and fee plan that meets the needs of Paso Robles today and tomorrow, a plan that aligns with City goals and objectives, and conforms to the law.
